

# **Computer Science**

Topic	Term	Content/skills developed	Reflection on previous learning	Qatar National Identity links
Python Programming	1	Content/Skills  Variables, data types, lists, loops, and functions.  Problem-solving, logical thinking, debugging.	Builds on Year 7–8 knowledge of Scratch, flowcharts, and basic Python.	Coding tasks can model real-life Qatari contexts (e.g., population data, shopping costs).  Encourages innovation and problem-solving linked to Qatar 2030 vision.
Cyber Security	1	Online threats, data protection, encryption, safe online behaviour.  Critical thinking, responsible digital citizenship.	Builds on earlier e- safety lessons and ICT acceptable use policies.	Highlights Qatar's role in protecting digital infrastructure.  Connects to national efforts to build secure smart cities and protect youth online.
2D Animation	2	Storyboarding, keyframes, layers, adding movement and sound.  Creativity, digital design, storytelling.	Builds on Year 7–8 work in graphics and simple animations.	Students can design animations around Qatari culture, heritage, and traditions.  Promotes pride and creativity while preserving national stories.
3D Animation	2	3D modelling, textures, lighting, rendering.  Spatial awareness, design thinking, resilience.	Develops from 2D animation and earlier design projects.	3D designs of Qatari landmarks, architecture, and cultural symbols.  Supports innovation and digital creativity in line with Qatar 2030.

	Emerging	3	AI, robotics, VR/AR,	Builds on practical	Direct tie to Qatar

#### **Mathematics**

Topic	Term	Content/skills developed	Reflection on previous	Qatar National Identity
Numbers	1	1. Place value for whole numbers and decimals (units, tens, hundreds, tenths, hundredths, thousandths). 2. Reading and writing numbers in words and digits. 3. Ordering and comparing positive and negative integers and decimals. 4. Rounding to a given place value and estimation strategies. 5. Prime numbers, composite numbers, square numbers and cube numbers. 6. Factors, multiples, highest common factor (HCF) and lowest common multiple (LCM). 7. Basic indices (squares and cubes) and simple roots (square roots). 8. Divisibility rules (2,3,5,9,10). 9. Using calculators appropriately and checking answers with estimation. 10. Place value: 4 237 means 4 thousands, 2 hundreds, 3 tens, 7 units. 11. Ordering: Put these in order smallest to largest: -3, 0, 2, -1. Answer: -3, -1, 0, 2. 12. Rounding: Round 3.476 to 1 decimal place = 3.5 because 0.07 rounds 3.47 up to 3.5. 13. Prime factorisation: 84 = 2 x 2 x 3 x 7 so 84 = 2^2 x 3 x 7. 14. HCF and LCM: For 18 and 24, HCF = 6, LCM = 72? Check LCM: multiples of 24 are 24,48,72 and 18 divides 72 so LCM = 72. For 8 and 12, LCM =	Reflection on previous learning  Builds on Year 6 knowledge of place value, addition, subtraction, multiplication, and division, as well as basic number properties (factors, multiples, primes).	•
		24. 15. Square and cube: 6 squared = 36, 4 cubed = 64.		

Algebra	1	1. Using and interpreting	Extends from arithmetic	Use formulas for
Expressions		algebraic notation: symbols,	and recognizing patterns	calculating ticket prices,
		coefficients, constants,	in number sentences;	transport costs, or
		terms, expressions.	introduces variables as a	simple budgeting
		2. Collecting like terms and	way of generalizing.	scenarios relevant to
		simplifying linear expressions.		daily life in Qatar.
		3. Expanding single brackets and		
		collecting terms after expansion.		
		4. Factorising simple expressions		
		by taking out a common factor.		
		5. Writing expressions from		
		word situations and diagrams.		
		6. Substitution: evaluate		
		expressions for given values of		
		variables.		
		7. Understanding and using		
		powers in algebraic form (x		
		squared).		
		8. Using letters to generalise		
		number patterns.		
		Examples:		
		9. Simplify: $3x + 5x - 2 = (3x + 5x)$		
		- 2 = 8x - 2.		
		10. Expand: $3(2x + 5) = 6x + 15$ .		
		11. Factorise: $6x + 9 = 3(2x + 3)$ .		
		12. Write expression: A		
		rectangle has length 3x and		
		width 2, area = $3x * 2 = 6x$ .		
		13. Substitute: Evaluate 3x^2 + 4		
		when $x = 2$ . $3*(2^2) + 4 = 3*4 + 4$		
7 7 4		= 12 + 4 = 16.		

Algebra	1	1. Solving one-step linear	Builds on balancing skills	Apply equations to real-
Equations		equations using inverse	from arithmetic (inverse	life problems in Qatar,
		operations.	operations, fact families).	such as calculating
		2. Solving two-step linear		costs for group trips to
		equations (including those with		Katara or Souq Waqif,
		brackets).		or sharing expenses
		3. Solving equations with		among family
		variables on both sides.		members.
		4. Forming equations from word		
		problems and solving them.		
		5. Solving simple equations with		
		fractional coefficients and		
		decimals.		
		6. Introduction to inequalities		
		and using the inequality symbol,		
		solving simple		
		linear inequalities.		
		7. Checking solutions by		
		substitution.		
		Examples:		
		8. Solve $2x + 5 = 17$ . Steps: $2x =$		
		12, x = 6.		
		2/6		
		9. Solve 3(x - 2) = 12. Steps: 3x -		
		6 = 12, 3x = 18, x = 6.		
		10. Solve $5x - 3 = 2x + 9$ . Steps:		
		3x - 3 = 9, $3x = 12$ , $x = 4$ .		
		11. Fraction coefficient: (1/2)x +		
		3 = 7. Steps: $(1/2)x = 4$ , $x = 8$ .		
		12. Word problem: "Three times		
		a number minus 4 is 11."		
		Equation 3n - 4 = 11, so 3n		
	37	= 15, n = 5.		

Fractions		1. Understand numerator and denominator and visual fraction models.  2. Equivalent fractions and simplifying fractions to lowest terms.  3. Converting between improper fractions and mixed numbers.  4. Addition and subtraction with same denominator and different denominators (finding common denominator).  5. Multiplication of fractions and fraction of an amount.  6. Division of fractions by integers and by other fractions (reciprocal method).  7. Converting between fractions, decimals and percentages.  8. Comparing and ordering fractions.  Examples:  9. Simplify 8/12. Divide numerator and denominator by 4 to get 2/3.  10. Add 1/4 + 1/3. Common denominator 12: 3/12 + 4/12 = 7/12.  11. Multiply 2/3 x 3/4 = 6/12 = 1/2.  12. Divide 3/4 ÷ 2 = 3/4 x 1/2 = 3/8.  13. Fraction of amount: 3/5 of 60 = 60 x 3/5 = 12 x 3 = 36.  14. Convert: 3/8 = 0.375 as a decimal.	Builds on knowledge of equivalent fractions, simplifying, and basic fraction operations from Year 6.	Fractions in Qatari food culture (e.g., dividing traditional dishes, recipes, or dates during Ramadan).
-----------	--	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------

Decimals	2	1. Place value with decimals to	Connects with place	Qatari riyal currency
		thousandths and beyond.	value, fractions, and	(riyals and dirhams),
		2. Reading and writing decimals	money in Year 6.	fuel consumption and
		in words and digits.		prices in Qatar.
		3. Ordering, comparing and		
		rounding decimals to specified		
		places.		
		4. Addition and subtraction with		
		decimals (align decimal points).		
	i	5. Multiplication and division		
		with decimals (shifting decimal		
		places).		
		6. Converting between fractions,		
		decimals and percentages.		
		7. Multiplying and dividing by		
		powers of 10.		
		8. Using decimals in		
		measurement and money		
		contexts.		
		Examples:		
		9. Place value: 4.237 is 4 units, 2		
		tenths, 3 hundredths, 7		
		thousandths.		
		10. Add: 2.35 + 0.7 = 3.05.		
		11. Multiply: $4.2 \times 0.5 = 2.1$ .		
		12. Divide: $12.6 \div 0.3 = 42$ .		
		Work: multiply numerator and		
		denominator by 10 to get		
		126 ÷ 3 = 42.		
		13. Convert fraction to decimal:		
		3/8 = 0.375.		

-				
Angles	2	1. Naming angles: acute, right,	B <mark>uild</mark> s on basic shape	Qatari architecture
		obtuse, straight, reflex,	recognition and	(e.g., Islamic geometric
		complete.	introduction to right	patterns in mosques,
		2. Measuring and drawing angles	angles in Year 6.	Museum of Islamic Art),
		with a protractor and estimating		modern buildings in
		angles.		Doha with unique angle
		3. Angle facts: angles on a		designs.
		straight line sum to 180 degrees,		
		around a point sum to		
		360 degrees, vertically opposite		
		angles equal.		
		4. Angles in triangles sum to 180		
		degrees; in quadrilaterals sum to		
		360 degrees.		
		5. Angle properties in parallel		
		lines: alternate, corresponding		
		and co-interior		
		angles.		
		6. Interior and exterior angles of		
		polygons and calculating interior		
		angle of a		
		regular polygon.		
		7. Using angle facts to find		
		missing angles.		
		Examples:		
		8. Missing triangle angle: In		
		triangle angles 45 degrees and		
		60 degrees, missing		
		angle = 180 - (45 + 60) = 75		
		degrees.		
		9. Parallel lines: If one		
		corresponding angle is 110		
		degrees then the matching		
		corresponding angle is 110		
		degrees.		
		10. Co-interior example: If one		
		angle is 70 degrees, the co-		
	4	interior angle on the		
		same side of the transversal is		
		110 degrees because 70 + 110 =		
		180.		
		11. Regular hexagon interior		
		angle = (6 - 2) x 180 / 6 = 120		
		degrees.		

Sequences	2	1. Recognising numeric and	Extends number pattern	Patterns in Qatari
Jequences	_	geometric patterns: term-to-	recognition from Year 6	heritage, such as Arabic
		term and position-to-term	(odd/even, multiples).	mosaic designs,
		descriptions.	(odd) even, mattiples).	carpets, and repeated
				1
		2. Generating terms of		geometric art.
		arithmetic sequences and		
		finding common difference.		
		3. Finding the nth term of simple		
		linear sequences (an = a + (n-1)d		
		form).		
		4. Recognising simple geometric		
		sequences and simple quadratic		
		sequences (intro		
		to square numbers).		
		5. Using algebra to represent		
		sequences and extending		
		sequences.		
		4/6		
		6. Using formulae to find		
		specific terms without listing all		
		previous terms.		
		Examples:		
		7. Sequence 3, 7, 11, 15.		
		Common difference = 4. nth		
		term = 4n - 1. Check: n=1		
		gives 3.		
		8. Sequence 2, 4, 8, 16 is		
		geometric with ratio 2. 5th term		
		= 32.		
		9. Squares sequence 1, 4, 9, 16,		
		$nth term = n^2.$		
		10. Given nth term 5n + 2, find		
		10th term = 5*10 + 2 = 52		

Shapes	2	1. Classifying 2D shapes	Builds on knowledge of	Explore Qatari
		(triangles, quadrilaterals,	2D and 3D shapes,	landmarks (e.g., dhow
		polygons) and 3D shapes	polygons, and symmetry	boats, stadiums built
		(prism,	from Year 6.	for FIFA World Cup,
		pyramid, sphere, cylinder,		Souq Waqif structures)
		cone).		and traditional Islamic
		2. Identifying properties: sides,		geometric art.
		angles, vertices, edges, faces,		
		symmetry lines,		
	h.	parallel sides.		
		3. Distinguishing regular and		
		irregular shapes, convex and		
		concave polygons.		
		4. Understanding nets of 3D		
		shapes and how faces form		
		solids.		
		5. Identifying types of triangles:		
		equilateral, isosceles, scalene,		
		right-angled.		
		6. Using coordinates to describe		
		positions of shapes and simple		
		constructions.		
		Examples:		
		7. A cube has 6 faces, 12 edges		
		and 8 vertices.		
		8. Triangle classification:		
		triangle with sides 5, 5, 8 is		
		isosceles because two sides		
		equal.		
		9. Symmetry: An equilateral		
		triangle has 3 lines of		
		symmetry.		
		10. Net: A net of a rectangular		
		prism is 6 rectangles arranged		
		to fold into a box.		

				T
Area	2	Perimeter and area for rectangles and squares: area = length x width.	Builds on rectangle and square area from Year 6.	Calculate the area of stadium pitches (Qatar World Cup), desert tents, majlis carpets, or
		Area of a triangle: area = 1/2 x base x height.		museum floor designs.
		Area of a parallelogram: area = base x height.		
		Area of a trapezium (trapezoid): area = (sum of parallel sides / 2) x height.		
		Area of circles (introduction): area = pi x radius squared (use of pi approx 3.14 or pi).		
		Area of compound shapes by splitting into simple shapes.		
		Units of area and converting between mm2, cm2, m2 and km2.		
		Using area in problem solving and real contexts. Examples:		
		Rectangle area: length 7 and width 4 gives area 7 x 4 = 28 square units.		
		Triangle area: base 6 and height 4 gives area = 1/2 x 6 x 4 = 12 square units.		
		Trapezium area: parallel sides 6 and 10, height 4. Area = ((6 + 10) / 2) x 4 = (16 / 2) x 4 = 8 x 4 = 32.		
		Circle area: radius 3, area = pi x 3^2 = 9pi approx 28.27.		

Ratio	3	Understanding ratio notation	Builds on fractions,	Link to Qatari cooking
		and simplifying ratios.	proportion, and scaling.	recipes (mixing spices,
				drinks like karak tea),
		Dividing quantities in a given		map scales of Qatar's
		ratio (partitive division) using		regions, or proportion
		the unitary method.		in traditional
				architecture.
		Ratio to fraction and percentage		
		conversions.		
		Cultivariant Automatical		
		Scaling amounts up and down		
		using ratios.		
		Ratio problems in recipes, maps		
		and mixture problems.		
		and mixed c problems.		
		Using ratio to compare		
		quantities and rates.		
		Examples:		
		Simplify ratio 12:8. Divide both		
		by 4 to get 3:2.		
		Divide 84 in ratio 2:5. Total parts		
		= 7. One part = 84 / 7 = 12. Parts		
		are 24 and 60.		
		Ratio to fraction: in ratio 2:3 the		
		first part is 2/5 of the whole and		
		the second is 3/5.		
774		3000,1313 575.		
		Scaling: A model is in ratio 1:50.		
		A real object of 2000 mm		
		becomes 2000 / 50 = 40 mm on		
		the model.		

Probability	3	Understanding probability as	Builds on understanding	Relate to national
,		number from 0 to 1 and as a	chance and fairness from	sports in Qatar (e.g.,
		fraction, decimal and	games in Year 6.	football match
		percentage.		outcomes, camel
				racing), weather
		Listing sample spaces for simple		forecasting, or raffle
		experiments (coins, dice,		draws during National
		spinners).		Day events.
				,
		Theoretical probability vs		
		experimental (relative		
		frequency) probability.		
		Using equally likely outcomes to		
		compute probability.		
		Simple tree diagrams for two-		
		step experiments and combined		
		events.		
		Complementary probability:		
		P(not A) = 1 - P(A).		
		Expected frequency in repeated		
		trials.		
		Examples:		
		51 1 10 54 (III S) 145		
		Single die: P(rolling a 4) = 1/6.		
		6: 1 : 50 1 1 1 7		
		Single coin: P(heads) = 1/2. Two		
		coins both heads: 1/2 x 1/2 =		
		1/4.		
		Complement: If P(rain) = 0.3		
		then P(not rain) = 0.7.		
	1	Expected frequency: If		
		probability of event is 1/6 and		
		you do 60 trials, expected		
		outcomes = 60 x 1/6 = 10.		
	<u> </u>	Odicomics - 00 x 1/0 - 10.		

Statistics	3	Collecting data: designing simple	Builds on interpreting bar	Use real data from
		surveys and recording results,	charts, pictograms, and	Qatar, such as
		understanding sampling.	simple data handling	population
		Types of data: categorical vs	from Year 6.	demographics, student
		numerical, discrete vs		surveys,
		continuous.		weather/climate graphs,
		Representing data: bar charts,		or traffic data in Doha.
		pictograms, pie charts, line		
		graphs, frequency tables, stem-		
		and-leaf.		
		Constructing and interpreting		
		histograms and using class		
		intervals for grouped data		
		(introduction).		
		Measures of central tendency:		
		mean, median, mode; and		
		spread: range (and introduction		
		to quartiles and interquartile		
		range).		
		Calculating mean from frequency		
		tables and handling outliers.		
		Interpreting and critiquing		
		graphs and data displays;		
		identifying misleading		
		representations and bias.		
		Basic probability links between		
		statistics and probability via		
		relative frequency.		
		Examples:		
		Mean, median, mode, range for data 3, 7, 7, 9, 12. Mean = (3 + 7		
		+7+9+12) $/5=38/5=7.6$ .		
		Median = 7. Mode = 7. Range = 12 - 3 = 9.		
		Frequency table mean		
		Interpreting graphs: If a bar chart		
		shows most students choosing		
		football, check sample size and		
		whether categories are		
		exhaustive.		
		Misleading graph example to		
1		discuss: unequal axis intervals or		
		pictogram symbols of different		
		sizes can mislead.

		Projet culturel: imaginer un	d'autorité.
		festival culinaire.	Les événements au Qatar sont souvent liés à des
			traditions islamiques (comme l'Aïd) ou à des fêtes
			nationales (comme la Fête nationale du Qatar, le 18
	/		décembre). Ces célébrations incluent des
			rassemblements familiaux, des repas traditionnels
			(machbous, harees), des spectacles culturels et un
			fort esprit communautaire.
			La cuisine qatarie est riche et variée, avec une grande
			importance accordée à l'hospitalité. Planifier un
			repas implique souvent de prévoir des plats
			traditionnels, du café arabe (gahwa) et des dattes, en
			respectant les horaires des repas liés aux pratiques
			religieuses (comme le jeûne du Ramadan).
			Organiser une soirée au Qatar tient compte des
			normes sociales et religieuses. Les soirées peuvent
			être familiales ou entre amis proches, avec un cadre
			souvent privé ou dans des lieux autorisés. Les
			activités respectent les valeurs culturelles, comme la
			musique traditionnelle et la danse, tout en évitant les
			comportements inappropriés en public.
			S'excuser et remercier en arabe est important dans la
			culture qatarie. Les excuses doivent être sincères et
			accompagnées d'un langage corporel approprié,
			témoignant d'une réelle volonté de réparer un tort.
			Un festival culinaire au Qatar pourrait mettre en
			avant la richesse des cuisines locales et régionales,
			incluant des plats qataris traditionnels comme le
	7.		machbous, les fruits de mer, le khubz (pain arabe) et
			le gahwa.
			ic ganwa.

Vous avez deux	1	Parler d'une rencontre.	Dans la culture Qa	atarienne, parler d'une
minutes?		Raconter une anecdote.	rencontre impliqu	e souvent de souligner
		Faire un portrait	l'importance du re	espect, de la générosité et de
		Engager une conversation	l'hospitalité. Une	rencontre peut avoir lieu dans
		Projet culturel: photographier	un majlis (salon tr	aditionnel) ou lors d'un
		visages de son village.	événement famili	al ou social.
		visages de son village.	Raconter une ane	cdote au Qatar se fait souvent
			avec un style resp	ectueux et indirect, en
			valorisant la sages	sse, l'humour subtil et la
			morale. Les histoi	res sont fréquemment liées à
			la vie quotidienne	, aux traditions bédouines, à la
			mer (pêche, perle	s)
			Faire le portrait d'	une personne au Qatar peut
			inclure la descript	ion de son rôle dans la famille
			ou la communaut	é, ses valeurs (hospitalité,
			loyauté, foi), ainsi	que ses attributs physiques et
			vestimentaires tra	ditionnels (comme la thobe
			ou l'abaya). Ce po	rtrait peut aussi évoquer
			l'importance de la	lignée et du respect des
			anciens.	
			Engager une conv	ersation au Qatar commence
			souvent par des fo	ormules de politesse, des
			questions sur la fa	imille ou la santé, et des sujets
			culturels ou religie	eux. Le respect des codes
			sociaux est essent	iel, notamment en évitant les
				és ou trop personnels avec des
			inconnus. Montre	r un intérêt sincère pour les
			traditions et la cul	ture qatarie facilite les
			échanges.	
		1	Ce projet mettrait	en lumière la diversité et la
			richesse humaine	de la communauté
			Qatarienne, en va	lorisant les différentes
			générations, les v	êtements traditionnels, les
			expressions et les	métiers locaux. Il permettrait
		1	de documenter l'i	dentité culturelle à travers les
			visages, tout en re	espectant les valeurs de
			modestie et de co	nsentement, très importantes
			au Qatar.

		developed	learning	Identity links
Athletics (Running, High Jump, Long Jump)	Term 1	Running, jumping (long jump/high jump), and take-off techniques  Sprint starts, controlled approaches, and safe landings  Coordination, balance, and spatial awareness	Builds on basic movement and running skills from previous years  Reinforces body control, rhythm, and safe jumping/landing techniques	Highlight Qatari athletes who have represented the country in international athletics like Moataz Barsham (high jump)  Promote pride in Qatari athletes and national sports achievements  Emphasise values of determination, perseverance, and striving for excellence
Swimming	Term 1	Development of water confidence and safety  Body positioning of the legs with introduction to front crawl arms  Body positioning of front crawl arms leading to full front crawl stroke	Builds on basic movement and body control from earlier PE lessons. Uses skills and safety routines learned in last year's swimming lessons to help students feel more confident in the water.	Encourages students to value health, safety, and personal development, reflecting Qatar's focus on well-being and active lifestyles as part of national priorities.
